

AMENDMENTS TO THE ABSTRACT

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

ABSTRACT

The invention relates to a method and device for processing signaling information in a telecommunications network, whereby a switching center exchanges signaling information with a subscriber terminal device. The signaling information is converted into at least one message in a switching station and the message is transmitted to at least one telecommunications services server that is connected to said switching station, whereby the telecommunications services server(s) execute(s) the telecommunications services that correspond to the messages. This enables a flexible and economical expansion of the telecommunications services offered by the switching station.
